MONEY DETECTION PROCESS

SERIAL NUMBERS & SECURITY FIBERS

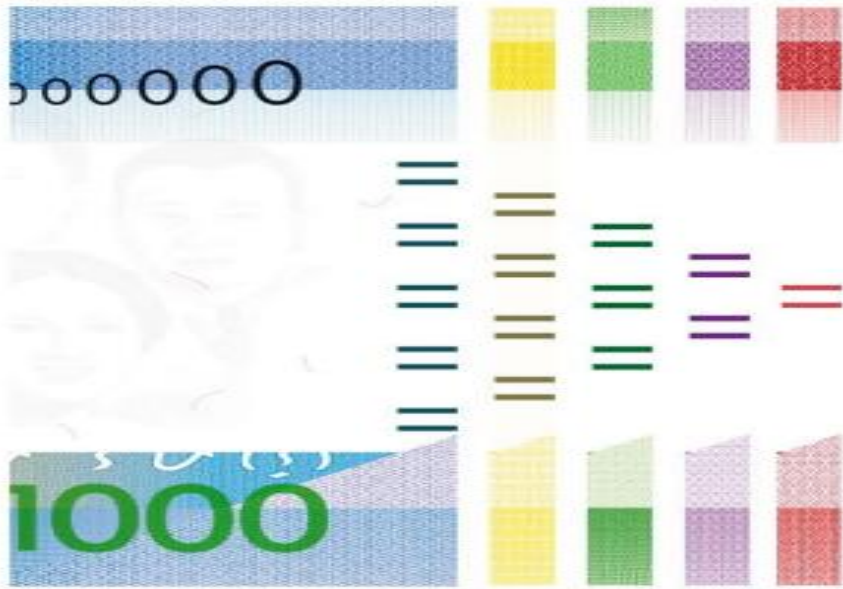

The serial numbers of the new Philippine Peso bills are composed of **one or two prefix letters and six to seven digits in asymmetric or increasing size.**

Red and blue fibers embedded in the banknote paper glow under ultra violet light. You can see this glow when you use a money detector device.

MARKINGS

TACTILE MARKS are **pairs of short horizontal lines** that are located to the **extreme right and left side** of the note.

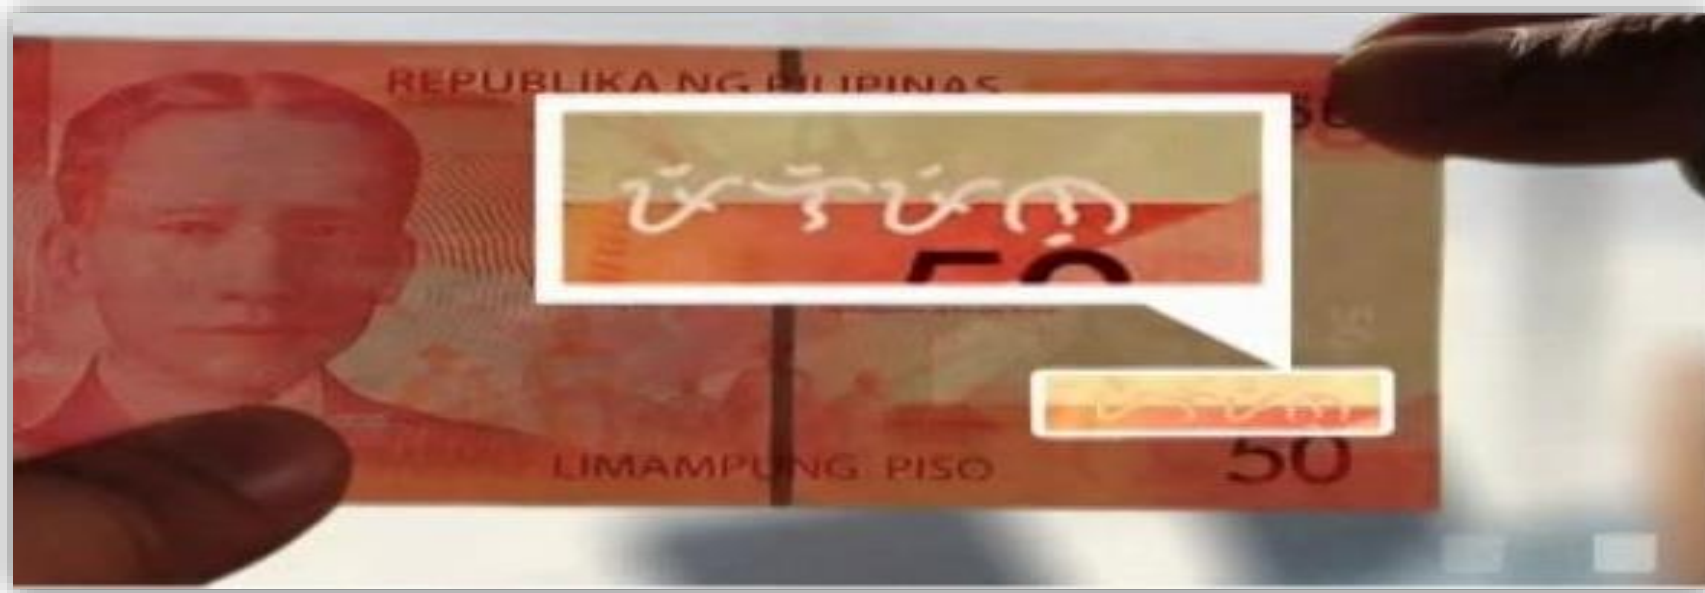

The WATERMARK shows the **shadow image of the portrait and the banknote's denomination on the blank space** when viewed against the light from either side of the note.

MARKINGS

When the banknote is rotated in 45 degrees and tilted downwards, a **CONCELEAD DENOMINATIONAL VALUE marking** can be seen super-embossed on the smaller version of the **PORTRAIT**.

ANCIENT BAYBAYIN

The word **"Filipino"** written in Philippine **ANCIENT** **"Baybayin"** alphabet can be seen in its complete form when banknote is viewed against the light.

REFLECTIVE FOIL

The 500 and 1000 peso bank notes now have the OPTICALLY variable device patch, **REFLECTIVE FOIL**.

For the 500 peso, the reflective foil bares the image of the **small BSP logo** and the **blue-naped parrot**.

While the 1000 peso bill, the reflective foil carries the image of the **small BSP logo** and the **South-sea pearl**.

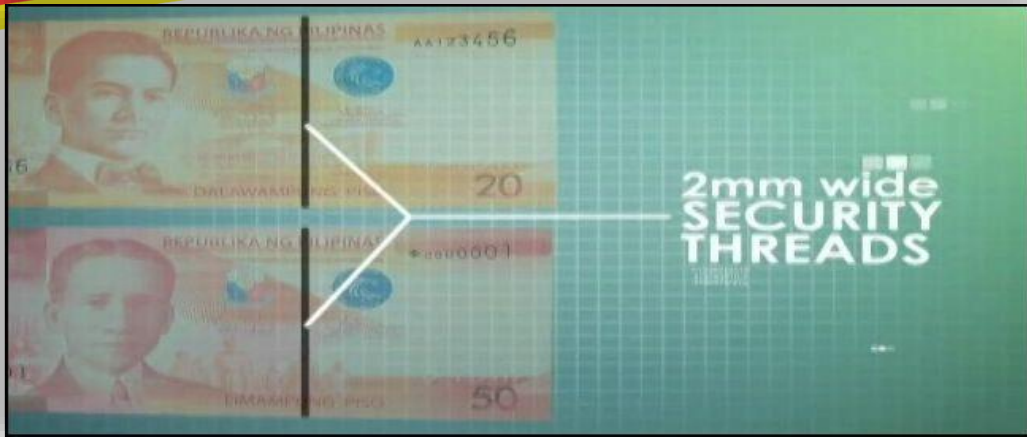

The reflective coil patches changes its colour from red to green when the note (peso bill) is rotated 90 degrees

TEXTURE & THREADS

*The New Philippine banknotes or peso bills textures are **NOT smooth** but a little bit **rough to touch** because they are made of 80% cotton and 20% Philippine Abaca.*

TEXTURE & THREADS

Viewed against the light, both the 20 peso and the 50 peso notes have embedded **2mm wide Security Threads** that can be seen with the banknote when held against the light.

Viewed from different angles, the color of the 4mm wide metallic security thread changes from **red to green**.

At the back of the security thread is printed **the initials of the BSP** in repeated series.

WHAT TO DO IN CASE OF A COUNTERFEIT MONEY

1

- ASK the customer for other BILLS.

2

- INFORM the customer that the money does not have the SECURITY features of a genuine bill.

3

- TELL the customer that the counterfeit money is to be confiscated since it is illegal under the Philippine laws to have a possession of it.

4

- WRITE “FAKE” in the money using permanent marker.

WHAT TO DO IN CASE OF A COUNTERFEIT MONEY
